

smart choices for a sustainable future.

GROWING BUSINESS THROUGH CLEAN ENERGY SOLUTIONS

Munro Distributing Company Inc. is an innovative, forward-thinking purveyor of electrical, conservation, and renewable energy solutions. Headquartered in Massachusetts, Munro also has locations in Rhode Island, New York, New Jersey, and California.

For over six decades and three generations, Munro has leveraged its expertise, buying power, and value-add philosophy to deliver exceptional products and services to contractor, ESCO, and Utility patrons nationwide. We have provided energy efficiency solutions for thousands of projects, including some of the nation's largest LEED initiatives. Munro has also supplied over 500,000 square feet of residential, commercial, and municipal rooftops with solar arrays.

Electrical Supplies

As seasoned industry veterans, our electrical project managers and staff can guide you through any and all types of electrical projects. Our professionals receive constant training on the latest technology and energy saving devices, and we can recommend cost-effective solutions for your project.

Our user-friendly e-commerce website features an interactive account management system including project item history, energy calculators, reference tools and helpful resources, spec sheets, product images and videos, and much more.

- Wholesale pricing on electrical supplies
- Project design and support
- Custom online support and pricing
- User-friendly website
- Bi-coastal branches
- Manufacturer support
- Product trainings and seminars

Energy Efficiency

Our Energy Efficiency Division has been an industry leader in providing the most advanced and cost-effective energy efficient lighting and controls for over twenty years. Through the long term support of leading manufacturers, we have been able to supply the latest products to over 800 million square feet of retrofit projects.

Our ability to support Energy Service Companies, Utilities, and contractors on cutting edge products and technologies that they need have enabled those customers to achieve a quick turn around time on their projects. We also specialize in Utility rebate programs and can assist our customers in procuring rebates. Our Energy Efficiency division also offers water and gas conservation products.

- Energy efficient lighting and controls
- Water and gas conservation
- Utility rebate program assistance
- Product trainings and seminars

Renewable Energy

Through our established relationships with industry-leading manufacturers, Munro's Renewable Energy Division offers premier renewable energy components. Our renewable energy professionals are available to assist our customers with custom system designs to meet a wide range of needs. Munro offers a host of services relating to system design, project management, product selection and procurement, and federal grant and state rebate procurement. We also host numerous training sessions and seminars for interested individuals to learn more about solar technology, rebate procurement, and how solar can help homeowners and small and large business owners save money.

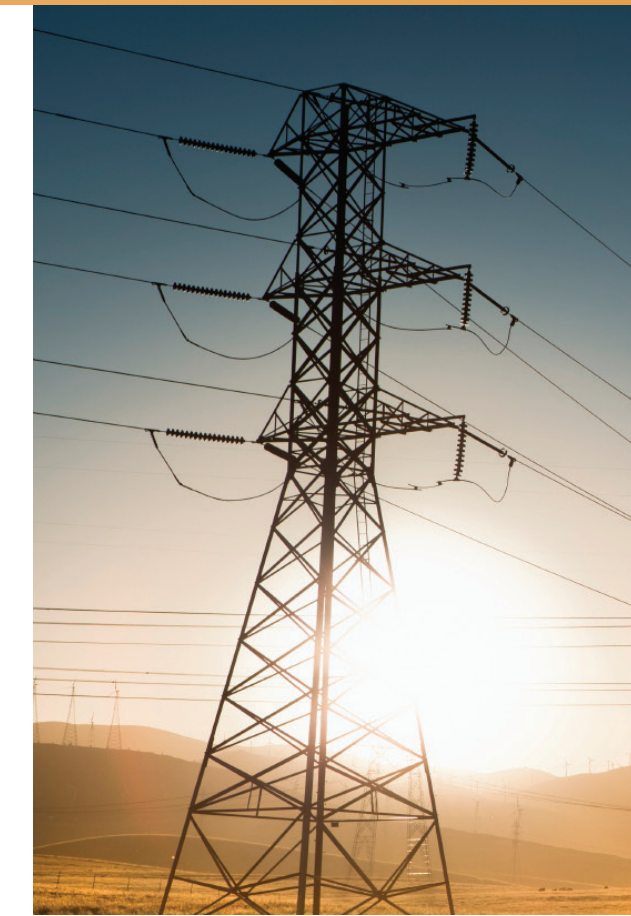

- Wide selection of proven components
- Competitive pricing
- Custom system design
- Project consultation
- Energy audits and site surveys
- Rebate and incentive procurement
- Solar PV and solar thermal training courses

Commercial Lighting and Power Distribution

For clients who demand the best, we have assembled one of the most experienced commercial lighting and power distribution teams in the industry. We will assist you in every phase of your project, from design to completion. We can recommend the latest energy saving products and devices, where they might have been overlooked otherwise. Replacing your current equipment with energy saving devices can help you gain points towards LEED certification. Since we offer a wide range of products and services, we can streamline a cost effective system for any size project.

- Engineering assistance
- Project management services
- Specification grade lighting fixtures
- Dimming and lighting control systems
- Power and distribution equipment
- Low and medium voltage switchgear
- Medium voltage transformers/substations

Mechanical Energy

If your facility has a low power factor, you could be paying a lot more to the utility than necessary. Munro can help you understand what power factor is, understand harmonic distortion and help you start saving by completing a power quality analysis. Improving the power factor improves efficiency, often resulting in significant economic savings. Benefits derived from improving your power factor may include reduced energy and distribution costs, lower distribution losses in your electrical system, and more!

- Energy saving calculations
- Variable Frequency Drives
- Certified energy audits
- Product and technology training
- Completion of Utility rebate paperwork
