Solar integration and sales made easy

We at Munro Solar know there is a wide choice of solar distributors and integrators to choose from. What sets us apart is that we are a complete solar division of a sixty year old wholesale electrical supply and energy efficient lighting distribution firm. Our designers have modeled hundreds of efficient designs and we have successfully navigated the state and federal rebate system to maximize the profitability of any sized system. Commercial, residential or municipal; let us put our experience to work for you.

Custom Design

We utilize the latest design programs to ensure your solar array will deliver the most energy for the best price. Our seasoned professionals can create the optimal array for any size facility.

Online Monitoring

Our inverters allow direct monitoring which allows you to see detailed graph data of the system's performance online. The data is recorded in real-time and you can view daily charts up to five years in the past. You can also receive phone text or email alerts with a description of any problem that may arise and a recommended course of action.

Component Supplier

Our immense buying power means you will receive the most competitive pricing available. We have warehouses stocked full of state-of-the-art panels, racking systems and other components ready to be delivered. We offer power optimizers, which are the perfect solution for maximizing the energy harvest of solar arrays that are affected by real world conditions.

Wide Selection of PV Modules
U.S. - European - Asian
Mono & Poly Crystalline
Thin Film - Building Integrated
Modular Roofing

Easy Install Mounting Systems
Roof Mount - Ground Mount
Ballasted - Pole Mount
Building Integrated

Cutting Edge Inverters
Residential - Commercial
Micro - Utility Scale - Off Grid

Wholesale Electrical Supplies
Conduit - Wire - Switchgear
Combiner Boxes - Whips

Munro Solar provided all the solar components and consultation for largest municipal solar project in Massachusetts. The City of Newburyport, through a Solar Power Purchase Agreements (PPA), needed a solar array for three large facilities whose electric only heating and cooling costs were constantly escalating, the middle and elementary schools along with town's DPW building. The massive 502kW system covers the roof of each facility and is comprised of 2,184 230w panels and 5 inverters and the town DPW building. The system's power output is equivalent to 70 homes per year and will offset 402 tons of carbon output annually.

City of Newburyport's municipal solar project.
Spread over two facilities the 502kW system is comprised of 2,184 230w Canadian Solar panels. The photovoltaic system's power output is equivalent to 70 homes and will offset 402 tons of carbon output per year.

We offer state-of-the-art components and design for any size commercial, municipal or residential project.

Cummings Properties' flagship green office building, the TradeCenter128, is a 500,000sqft LEED Gold certified office building which represents the future of new construction. TradeCenter 128 was constructed to the very latest energy-saving standards. High efficiency glass, special roof and wall insulation, and super efficient fluorescent lighting were very important in achieving Gold Level LEED certification for the Center's office space.

Munro Solar provided consultation and all the necessary components for the two phase project. The system has 1018 panels, easy-to-install mounting system and 2 inverters.

"We were very pleased with Munro Solar's design and product selection for Cummings Properties' 98kW solar installation at TradeCenter 128. The system performs as we expected and adds tremendous value to our state-of-the-art facility!"
Gary Gresh, Sustainability Manager Cummings Properties
