

Partner with Munro Distributing for every electrical need.

We can guide you through the array of the latest electrical supplies and labor saving devices. Our design teams are experts with energy efficient new construction design, facility power distribution and lighting retrofits. If you want to create your own on-site power our renewable energy supply and design team can integrate a system that will fit your needs. As an engineered systems distributor our life safety division will ensure the safety of any facility whether the need is new construction or retrofit.

Growing business through advanced technology, labor saving devices and green energy solutions.

"Our decision to select your company as our National Electrical Supplier has exceeded our expectations. From the day to day service at the project level, the competitive pricing, and most importantly the understanding of the latest technologies and our industry as a whole your team has supported us and allowed us to stay focused on providing our customers the best possible project and grow as a company."

Peter N. Christakis
Director-Construction
Amerseco

For almost seventy years, Munro Distributing has helped electrical contractors succeed by offering the latest and most cost effective supplies coupled with unparalleled service.

Throughout the years, we have forged ahead through changing times by adding advanced service offerings and the latest technical products but will always stay true to our past.

Services

Having the right products at the right time is the key for any electrical project. Our strong manufacturer support ensures that our pricing will always be competitive and flexible. We have nationwide warehouses full of inventory and a fleet of our own trucks. However, it is really our employees that give us the edge over any competitor because of their training, dedication and willingness to go above and beyond for any customer.

Electrical Supplies

With dozens of seasoned industry veterans, our electrical project managers and staff can guide you through any type of electrical project. Our professionals receive constant training in the latest labor and energy saving devices and can recommend cost effective substitutions for a project.

Our user-friendly e-commerce website features an interactive account management system, project item history, energy calculators, cross reference tools, spec sheets, product videos and much more.

Energy Efficient Lighting

Our conservation division has been an industry leader in providing the most advanced but cost effective energy efficient lighting and controls for over twenty years. Through the long term support of the biggest names in energy efficiency, they have been able to supply the latest products to over 800 million sq.ft of retrofit projects. Their ability to train Energy Service Companies, large utilities and contractors on the cutting edge products they need to expedite their energy efficient programs or projects have enabled those customers to achieve a quick turn around time. They also offer commercial water and gas saving components.

Commercial Lighting & Power Distribution

We have one of the most experienced commercial lighting and power distribution teams in the industry. We will assist you in every phase of your project, from design through completion. We can recommend the latest energy efficient products or building dimming systems where they might have been otherwise overlooked, which will help you gain points towards LEED certification. Since we offer full service capabilities, we can streamline a cost effective system for any size project.

Smart Grid Technology

The generation, distribution and consumption of energy is being revolutionized and we will be there every step of the way by offering smart grid components for commercial and residential applications.

Renewable Energy

Our team of renewable energy professionals can customize a on-site power generation system for size facility. They work with the world's leading manufacturers to design and supply all the components needed for large scale commercial systems. Using the latest design programs, they are able to ensure your solar array will deliver a quick return on investment and are able to successfully navigate the rebate and Renewable Energy Certificate programs.

Life Safety

Our NICET-certified systems professionals can design and supply code-compliant solutions for any type of facility, whether the need is new construction or retrofit. As a total solutions design provider, our systems are one of the most cost effective on the market. Along with testing every system to meet state and local requirements, they also supply training, consultation and CAD services.
